[What is claimed is]

1. A relay terminal block, wherein

a terminal fitting 2 is integrally fixed to an insulated terminal board 1 having a hole 3 for passing through a lead wire;

a fastening plate 4 disposed in the hole 3 has threaded engagement with a screw 5 rotatably disposed to the terminal fitting 2;

an insulating coating-removed tip of the lead wire is secured between the terminal fitting 2 and the fastening plate

4 that moves to a higher position by rotation of the screw 5.

[Brief Description of the Drawings]

Fig. 1 is a perspective view illustrating a conventional method of connecting a lead wire. Fig. 2 is a perspective view illustrating an unsatisfactory connection due to no use of a connector. Fig. 3 is a front view of a relay terminal block of the present invention. Fig. 4 is a section view taken along the line A - A of the relay terminal block. Fig. 5 is a front view illustrating the structure of a terminal board. Fig. 6 is a section view taken along the line A - A of the terminal board. Fig. 7 is a perspective view of a terminal fitting. Fig. 8 is a perspective view of a fastening plate. Fig. 9 is a section view illustrating another structure of a screw-fixing section of an exemplary embodiment. Fig. 10 is a section view of the terminal block in a typical use.

1: Terminal board 2: Terminal fitting 3: Hole for passing through a lead wire 4: Fastening plate 5: Screw 6: Stepped section 7: U-Groove 8: Bottom section 9: Screw hole 10: Insert hole 11: Lower section 12: Terminal fitting-insert hole 13: Screw-fixing hole 14: Horizontal plate 15: Engagement projection 16: Front plate 17: Back plate 18: Opening 19: Connecting section 20: Projection 21: Screw hole 22: U-Groove

砂実用新案登録請求の範囲

リード線挿入穴3を開設した絶縁性の端子盤1に端子金具2を一体的に固着し、端子金具2に回転自在に取付けたビス5のネジ部に前記リード線挿入穴3に内装した締結板4を螺合し、ビス5を回転することによつて締結板4を適宜上昇せしめ、端子金具2と締結板4とで絶縁被覆を取去したリード線の先端部を締結する如くしたことを特徴とする中継端子台。

図面の簡単な説明

第1図は従来のリード線の接続方法を示す斜視 図、第2図は接続コネクターを取り付けずに接続 した場合の不具合を示す斜視図、第3図は本案中 川崎市幸区神明町2丁目42番地 森松電子工業株式会社内
